Impact of Fat & Grease Traps

It is important to be aware of the damage being caused to our drainage and sewer systems by letting grease, oil and fats go down the drain.

People who work in industrial kitchens should understand the necessity of separating oils, fats and grease from waste water before it flows into the municipale drainage system. In the event that the fats and grease are not separated from the water before being disposed of, the following issues may arise:

*Potential Damage
to the Grease
Trap Tank*

*Omission of
Offensive
Odours*

*Health
Department
Fines*

*Help to
Prevent
Blockages*

BEFORE

AFTER

Recycling Methods & Benefits

Burgess Plumbing offers a fully sustainable solution for the removal and management of fats, oils and grease. Our professional technicians will remove the F.O.G waste after conducting a deep cleaning of grease traps.

After removal, we treat the F.O.G waste and it is turned into compost products that can be used in agricultural applications. This creates a full turnkey solution that can help you not only save money, but the environment too.

- 1** Separation of fats, oils and grease materials from traps.
- 2** Deep cleaning of grease traps by our skilled technicians.
- 3** Transportation of F.O.G Waste to recycling plant for processing.
- 4** F.O.G Waste is treated and fed to worms to create composting products.
- 5** Compost is fed into the soil to promote healthy growth of plants and crops.

Installation and Deep Cleaning

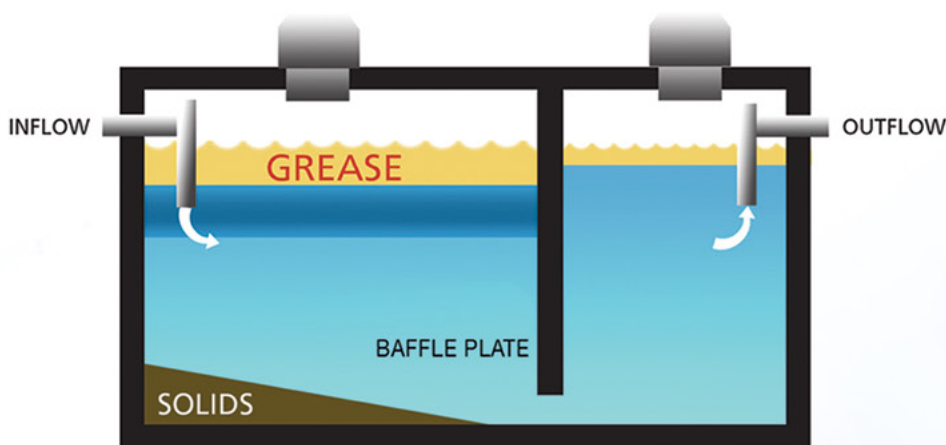

Installation

Burgess Plumbing Services specialises in the supply and installation of Grease Traps to all industries, ranging from the food and beverage industry, hotels, corporate kitchens, hospitals, coffee shops, retail food chains and commercial office blocks.

Deep Cleaning

NB! Once the effluent has been removed from site, it becomes the responsibility of Burgess Plumbing Services to discard the waste, at a waste disposal site. A safe disposal certificate will be issued to you on a monthly basis.
